A STOBAG patio canopy transforms your garden into a sheltered outdoor living space – for more light, more style and more time with the important people in your life.

A handwritten signature in black ink, appearing to read 'A. Michel'.

Alain Michel
Group CEO and
Member of the Board of Directors,
STOBAG AG

Dear Customers

Outdoor living has long been more than just a trend – it's a lifestyle statement. More and more people are choosing to invest in their gardens, creating outdoor spaces that feel like an extension of the home. Our products for these spaces are not just functional solutions; they are a continuation of a building's architecture – with cubic forms, slender lines and perfect integration.

Whether as a freestanding island in the garden or mounted to the facade – a STOBAG patio canopy creates spaces that can be used all year round. They protect outdoor furniture and kitchens, allow daylight to flood into the house, and offer outstanding flexibility, comfort and convenience. Combined with vertical shading and sliding glazing, a glass roof, slat roof or fabric canopy creates a cosy, inviting space.

Our vision is to create inspiring, sheltered spaces based on sophisticated solutions and Swiss precision. STOBAG stands for quality, design and innovation – and for the conviction that architecture and nature can exist in perfect harmony. It's not just about products – it's about creating shared living spaces that connect people, ideas and moments.

For every aspect of life – a privacy screen for your balcony, shading for panoramic windows or glass roofs, or the perfect patio solution. You can explore every facet of our diverse product portfolio in our showrooms.

Since starting out in 1964, we have been continually developing shading and weatherproofing solutions that create a seamless link between architecture and nature.

For over 60 years, STOBAG – an acronym derived from “Storen Bau Gattikon” (shutter/blind construction in Gattikon) – has stood for quality, progress and a passion for making outdoor living more attractive. What was once a small workshop has evolved into a globally operating family business with 750 employees worldwide, 350 of whom work at the headquarters in Muri, Aargau.

Under the leadership of our CEO Alain Michel, we are continuing the success story into the family’s third generation by combining tradition with modern technology and setting new standards in design and comfort, always with a clear aspiration: to create harmony between architecture and nature – and to develop solutions that inspire generations.

**Design with heritage**

For us, Swiss design means clean lines, premium quality and intelligent functionality. Innovation is in our DNA. From the revolutionary Trilliant telescopic-arm technology and modular awnings to modern glass roofs that expand the living space into the outdoors – we are continually setting new standards. With great attention to detail, we design products that not only offer protection but also provide inspiration – making your home a cosy and inviting place to stay.

Responsible manufacturing

We manufacture our products at four locations in Switzerland, Europe and Canada – using raw materials almost exclusively sourced from long-standing European partners. Here, state-of-the-art production meets precision craftsmanship – to create solutions that inspire on the strength of their design, functionality and durability. Sustainability is at the heart of what we do: short supply chains, carefully chosen materials, robust designs, repairability and recyclability.

Strong partnerships

We are committed to delivering exceptional service and expert guidance you can rely on – with a personal touch. We work with over 500 specialist partners in Switzerland and more than 1,000 worldwide – so we are always close to our customers and able to provide personalised advice and support. We take pride in nurturing long-term partnerships founded on trust, some of which have lasted for generations.

Every product a one-off

Our custom shading solutions are as unique as the way you choose to live outdoors. We offer a wide range of fully customised models, colours and comfort options that blend in harmoniously with any surroundings. Robust materials and precise workmanship ensure long-lasting enjoyment and sustainable use. Our shading solutions are perfectly tailored to your needs and your style, offering you protection and comfort for many years to come.

**Find inspiration**

Our 2000 m² rooftop showroom – open, stylish and full of possibilities – invites you to discover new living spaces. Immerse yourself in a living showcase of garden design and functionality, surrounded by water, light and flourishing plants. Our diverse range of products demonstrates how indoor living spaces can seamlessly flow into the outdoors. Outdoor furniture and a contemporary outdoor kitchen add inspiring highlights, bringing the perfect harmony of architecture and nature to life. This creates a space where ideas grow – and your personal retreat begins.

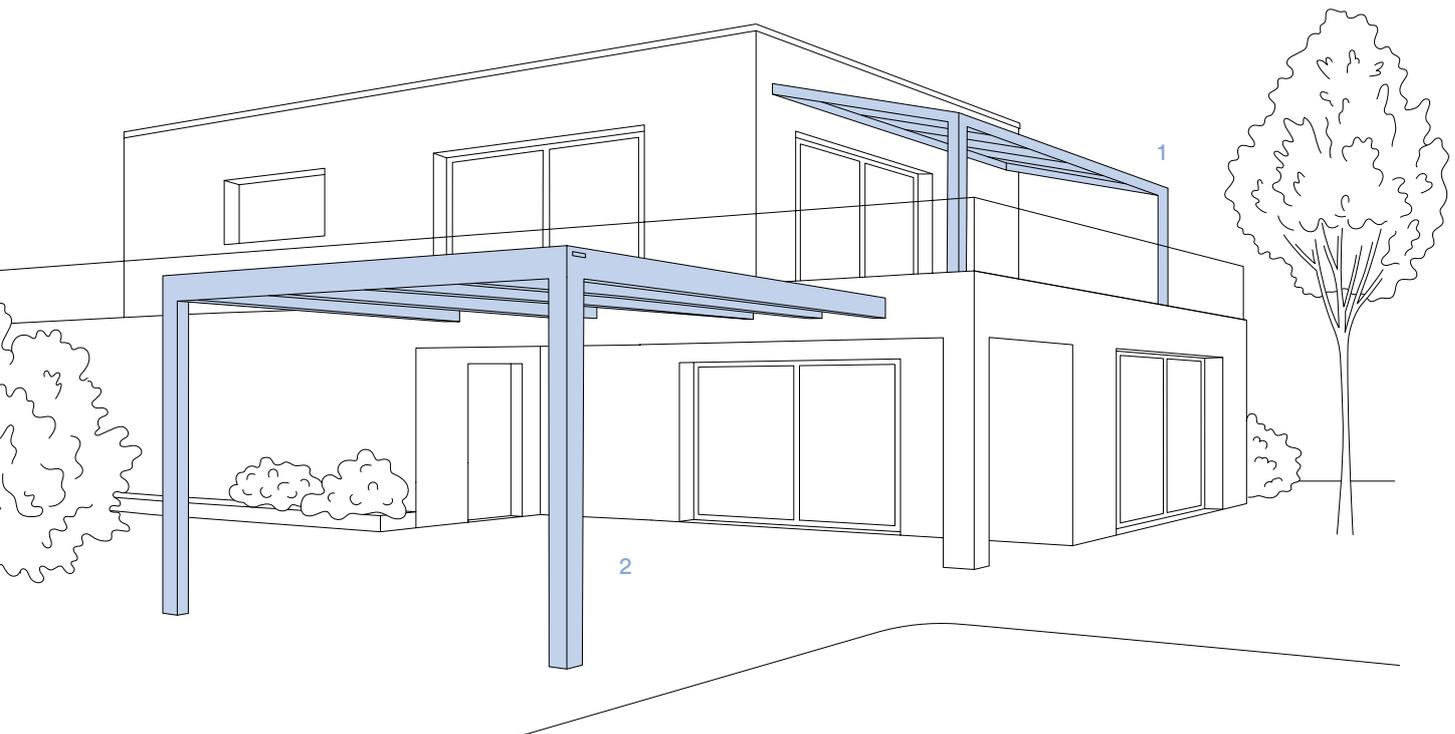

Customised patio canopies create space for living outdoors but with the best possible protection. Be it for a sunny patio or a sheltered seating area, our high-quality canopy solutions adapt flexibly to your home and offer protection you can count on.

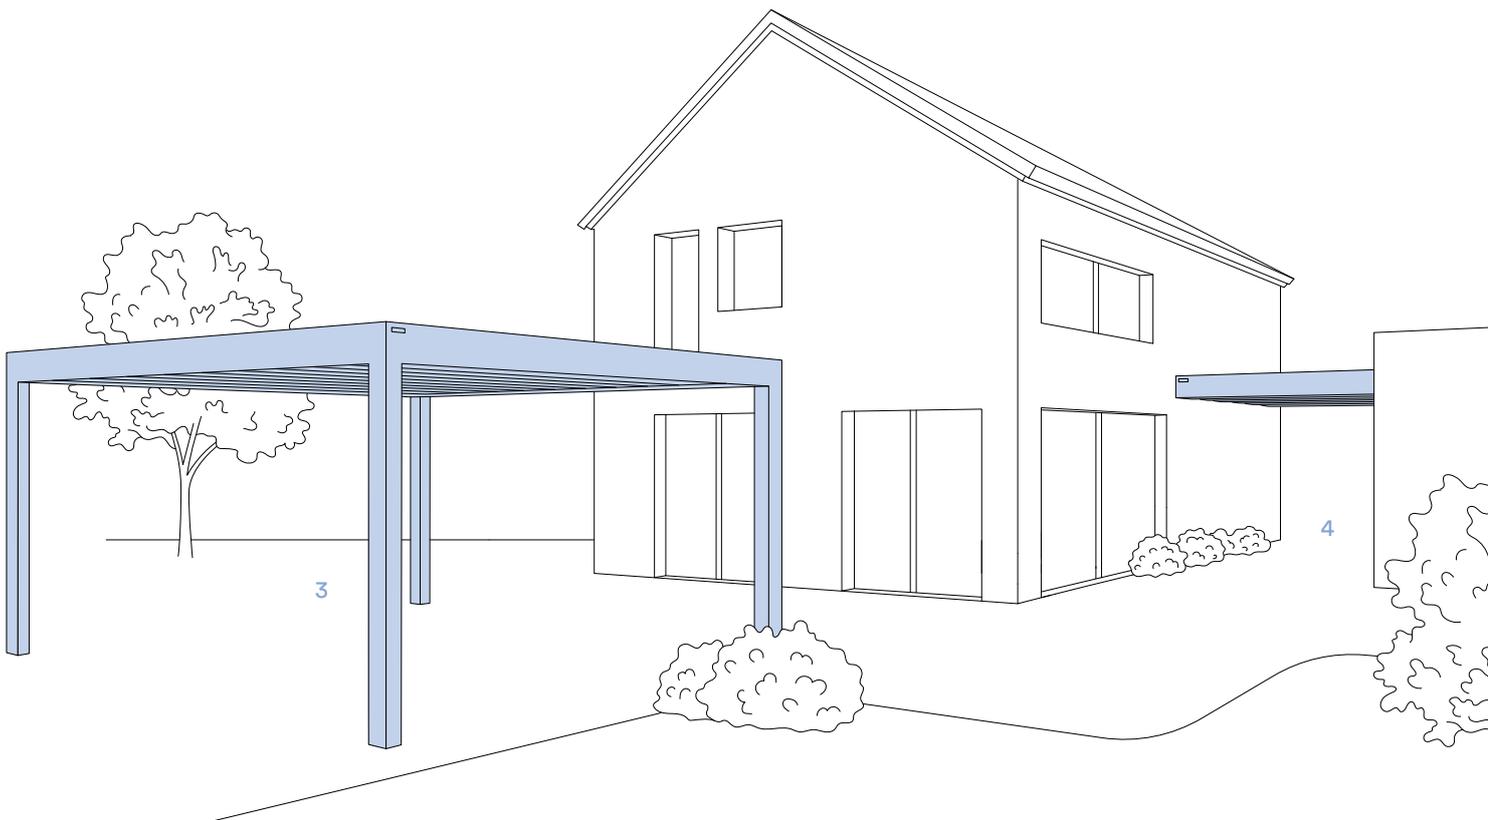

1 Rooftop terrace

Exposed to the sun all day long – robust protection is essential. It pays to plan well in advance, especially when designing large areas. Whether freestanding or mounted to the facade, our canopies offer sustainable protection and transform your outdoor space into a comfortable oasis of well-being.

2 Patio

A canopy not only protects your patio from the weather; it also expands your living space into the outdoors. Glass roofs allow light to flood in. Slender, integrated solutions such as glass, slat or fabric roofs create a harmonious link between the building and the outdoor space.

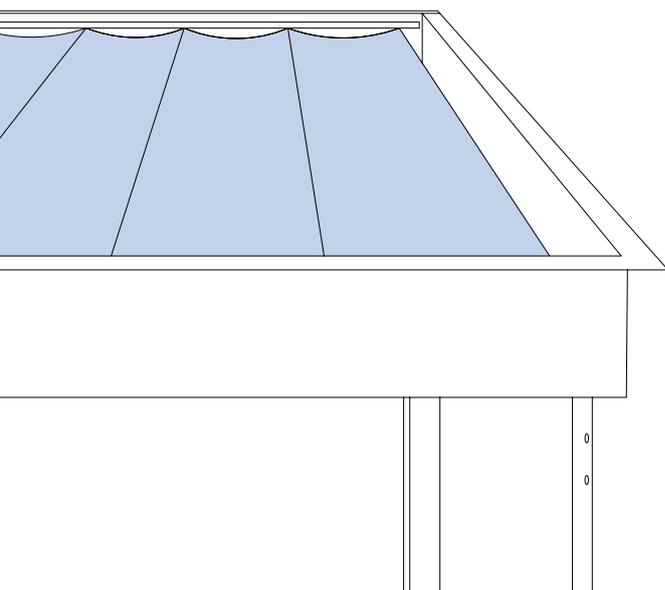

3 Garden
Freestanding patio canopies as stylish islands in the garden. Be it a fabric covering or rotatable slats – the additional area creates sheltered space in the open air while protecting your garden furniture from the wind and weather.

4 Atrium
An atrium creates new space between two or four walls – open, airy and flexible. Whether it be an elegant slat roof or a light fabric roof – both designs provide shelter and can be conveniently opened when weather conditions permit.

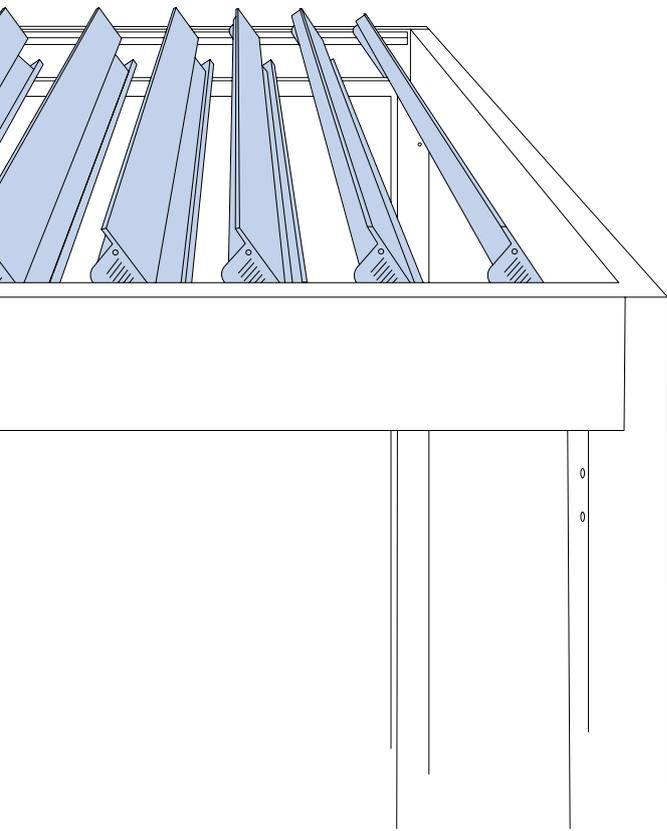

Whether you choose fabric, elegant slats or clear glass – each canopy design has its own unique character. Each material offers different design, comfort and usage options.

	 FABRIC	 SLATS	 GLASS
 SUN PROTECTION	✓	✓	(✓)
 RAIN	✓	✓	✓
 YEAR-ROUND WEATHER PROTECTION	–	(✓)	✓

Fabric roof

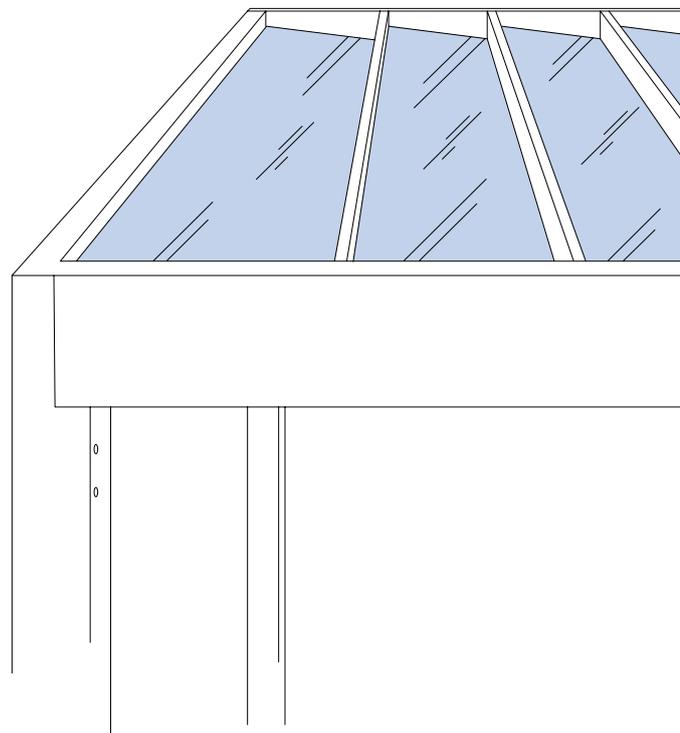

Light and flexible – our high-quality fabric roofs are available in various designs and colours and can be opened conveniently. They provide pleasant sun protection and – depending on the model – also reliable rain protection, allowing you to create a cosy open-air atmosphere and give your patio that extra-special something.

**Slat roof**

The slat roof consists of flexibly adjustable aluminium slats that open or close depending on the weather. So you decide how much light you'd like on your patio – as well as when to release any built-up heat by opening the slats. The slats can be finished in a different colour than the frame to add a stylish note – for a bright, friendly ambience that enhances your outdoor space.

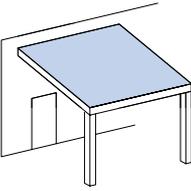

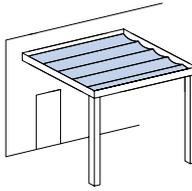

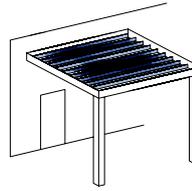

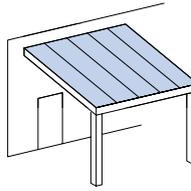

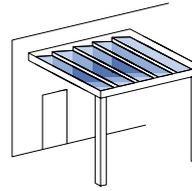

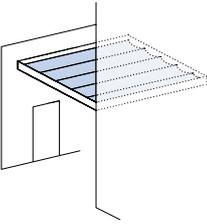

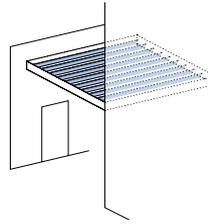

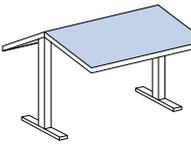

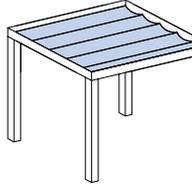

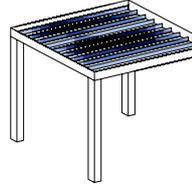

Glass roof

A glass roof offers reliable weather protection all year round while also letting daylight flood in, making it an all-in-one solution that gives you both shelter and light. Your garden furniture and even the outdoor kitchen remain reliably protected throughout the seasons – 365 days a year. Integrated roof shading is highly recommended, as heat builds up very quickly under a glass roof on sunny days. It ensures pleasant shade, reduces heat and provides reliable glare protection – for noticeably more comfort.

Choose your STOBAG patio canopy

Patio canopies offer protection, comfort and style – tailored to your needs and structural requirements. The following overview shows the main product variants, examples of their use and suitable installation methods for your outdoor living.

	Fabric	Slats	Glass

Freestanding					
					

* Use depends on the particular model and the selected settings. Fabric roofs can also offer reliable protection in moderate rain, depending on their design. Thanks to intelligent control and factory-preset parameters, slat roofs can also be used in winter. The presettings take into account frost; the slats open automatically to stop them from freezing together and prevent snow build-up.

BAVONA Hard-Top

Controlled Light. Open Space.

Perfect harmony between technology and design – for a stylish outdoor retreat. The elegant BAVONA slat roof combines minimalist design with maximum functionality: the aluminium slats are rotatable up to 160° and allow precise control of light, shade and ventilation – depending on the time of day and how the mood takes you. Whether gentle morning light or cooling afternoon shade – BAVONA adapts flexibly, creating a bioclimatic oasis of well-being in the open air.

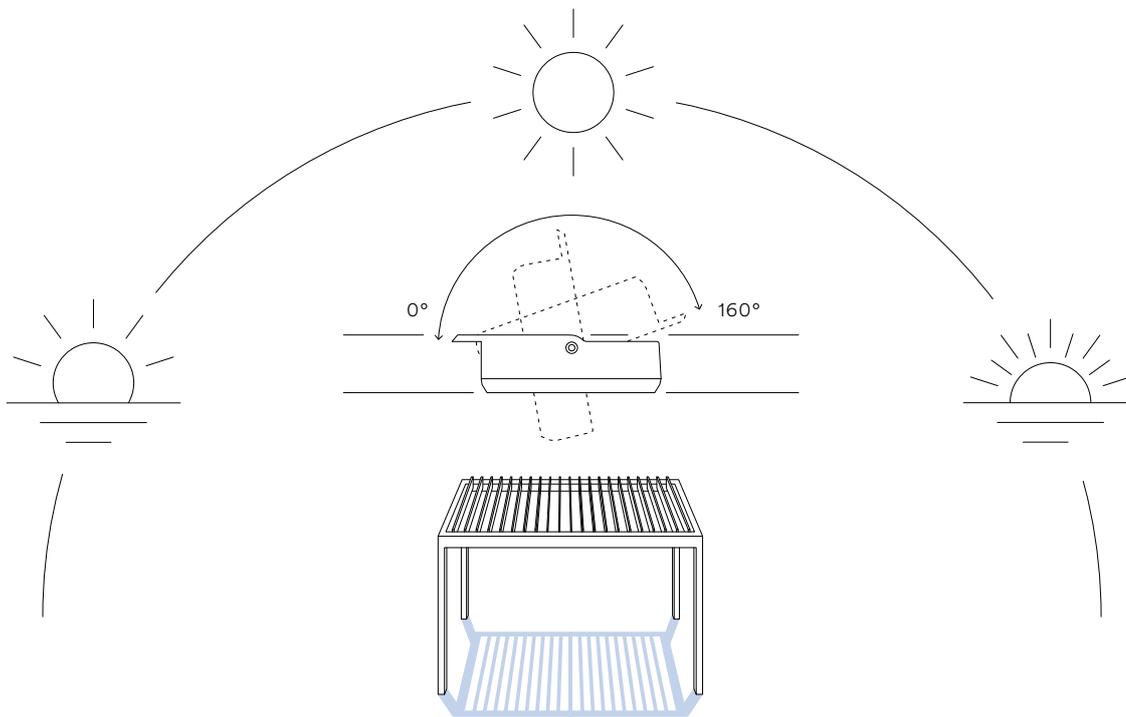

A multitude of installation options make BAVONA a true adaptive system: freestanding in the garden, mounted to the facade wall or integrated between buildings – it can even be installed on existing structures. This means the system blends harmoniously into any architecture, creating new scope for patios or atriums. BAVONA can be custom-configured thanks to its modular expandability: side shades, glazing systems and integrated LED lighting enhance comfort – even in windy or adverse weather conditions. Discreet technology, clean design and high-quality materials make BAVONA ideal for stylish outdoor living on penthouse terraces and garden patios.

Light, air and freedom – any way you like

Morning sun

Midday sun

Evening sun

At the heart of the patio canopy are the 160° adjustable aluminium slats. This outstanding flexibility allows precise control throughout the day. Gentle morning sunlight, pleasant midday shade and a clear view of the evening sky – the slats can adapt to any mood and any weather. When closed, they provide reliable shelter from the rain, creating a safe haven for you. When open, they allow natural air circulation: warm air rises and escapes, while cooler air flows in, creating

a pleasant bioclimate. Rather than being just a technical detail, the 160° adjustability also enhances comfort and convenience; it allows precise light control, prevents hard shade and ensures a friendly, light ambience – even in strong sunlight. Therefore, your outdoor space remains a great place to be, even in hot weather, and a favourite spot at any time of day – an ideal opportunity to start the garden season early and extend it into the golden late autumn.

Scan the QR code and see BAVONA in action –
with impressive 160° rotatable slats.

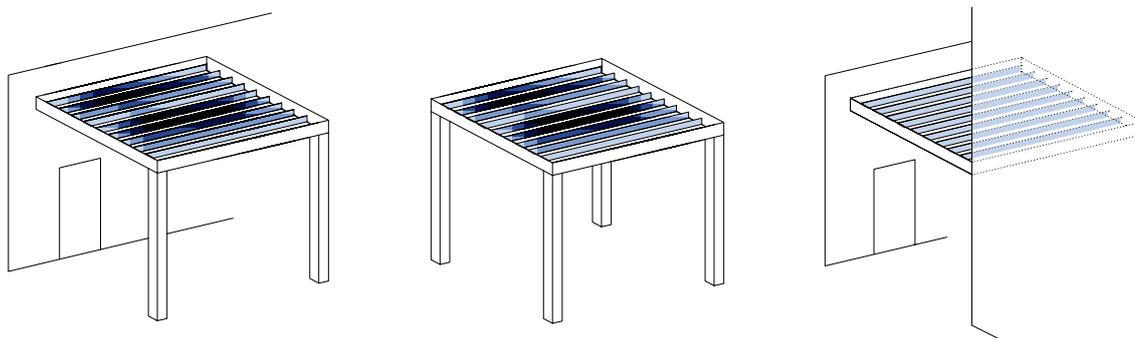

A multitude of installation options for any architecture

Design your favourite outdoor spot just how you like it: whether an urban inner courtyard, spacious garden or elegant rooftop terrace – BAVONA blends in harmoniously with any architecture, creating spaces that invite you to linger. Installation on a wall creates a flowing link between indoors and outdoors, transforming your patio into an extension of your living space. The freestanding

version gives you maximum freedom – a private retreat surrounded by greenery. Recessed installations ensure particularly discreet solutions – seamlessly integrated for clean lines and stylish elegance. BAVONA transforms your outdoor space into an oasis of well-being – regardless of location and architecture.

Proven strength, authentic quality.

With an average size of 4 × 6 metres, BAVONA features a stable aluminium construction with a snow load of up to 120 kg/m² – equivalent to the weight of a fully grown grizzly bear. It stands for quality you can feel and safety you can count on. BAVONA is durable, elegant and uncompromisingly robust.

Two-tone design

with light-coloured slats

The two-tone design breathes new life into the design of modern al fresco solutions. Choosing slats that are lighter in colour than the main frame – such as elegant white or grey slats with an anthracite frame – creates a visually appealing contrast.

Advantages at a glance:

- More light: Light-coloured slats reflect daylight and create a welcoming ambience – even when the shades are closed.
- Less heat: Lower heat absorption ensures a pleasant temperature without the need for additional cooling.
- Light look: Subtle colouring has an elegant appearance and blends in harmoniously with any architecture.
- Custom design: Two-tone design reflects personal style and adds character.

Flexible side shades and glazing create a cosy ambience, protect against the weather and prying eyes, and adapt to your needs.

Sheltered and open at the same time

The optional vertical shades provide reliable protection – when the sun is low or in windy weather – as well as offer greater privacy and a sense of security. They offer flexible use while ensuring optimal thermal comfort. In designs with large glass areas or open sides in particular, they offer effective glare protection and enhance outdoor comfort. The optional side glazing likewise complements the system perfectly, providing protection even in heavy rain while allowing a clear view of the outside. As a fixed solution or with flexible sliding glazing, it blends seamlessly into the cubic, compact design and emphasises the high-quality aesthetic of the entire outdoor concept.

Flexible rather than fixed

Side shades and glazing are not only usable at the same time; they can also be easily added later. The modular design allows custom combinations – tailored to your preferences and the layout of the space. Whether you need more protection, more of a view or more privacy – the system grows according to your needs and leaves plenty of scope for future expansion.

All the technical details are listed for you on page 33

Atmospheric light

The discreet, dimmable Tunable White LED lighting creates pleasant mood lighting that puts your outdoor space in the limelight, even at dusk or evening. Be it warm light for hours spent relaxing or cooler white for convivial moments – the colour temperature is infinitely variable, allowing you to create just the atmosphere you like. The LED strips are fully integrated into the slats and the construction frame, resulting in a high-quality, uncluttered look – with no visible cables or additional modules whatsoever. The lighting blends seamlessly into the design, emphasising the installation's architectural clarity.

Customised design freedom

Be it an elegant two-tone design or individually selectable options – BAVONA adapts to your needs and style with millimetre precision. Adjustable

slats, integrated lighting and a wide choice of colours allow you to create an outdoor experience that's as unique as you are.

ASTANO Hard-Top

Where light meets protection.

This supportless slat roof combines design and function, sheltering your outdoor space to create an oasis of well-being. Aluminium slats adjustable by up to 115° enable you to precisely control light, shade and ventilation – for a pleasant climate all day long. Thanks to its robust design, ASTANO is also ideal for high roof loads, impressing with its stability and durability.

Whether mounted on an existing structure or between two or four walls – the ASTANO Hard-Top adapts to your surroundings and is perfect for atriums or skylights. You can open or close the roof at the simple push of a button, while optional extras such as dimmable LED lighting provide even more comfort and convenience. For moments of sheer relaxation and style outdoors – whenever you like.

With its adjustable slats, clear design language and flexible installation options, ASTANO creates a sheltered outdoor space that adapts to your daily needs – comfortable, elegant and weatherproof.

Robust construction – for all weather

With a load-bearing capacity of up to 110 kg/m², it ensures maximum stability and reliable durability, even in the case of large installations measuring 6 × 6 metres. Be it snow load, wind pressure or other weather conditions – the construction remains stable and safe.

Slats in a different colour

The slats for the ASTANO Hard-Top are also available in a lighter colour – for greater light reflection, less heat build-up and a welcoming feeling of space. The discreet look blends in harmoniously with both modern and classic architecture, emphasising the individual style of your outdoor space.

VETRO FINO

Freedom. Light. Limitless.

A new era in outdoor living – the VETRO FINO glass roof heralds a new generation of design and functionality. It creates relaxed moments in the open air – come rain, shine or snow. Its uniquely slimline, cubic design with a frame height of just 20 cm blends timelessly into any architectural style and sets new standards when it comes to aesthetics and comfort.

The modular shading and protective elements are fully integrated into the sophisticated construction – for a harmonious overall look where the technology remains concealed. Everything is perfectly coordinated – from the elegant styling to the seamless integration and the high-quality features.

A slim construction frame that is just 20 cm thick and a technically sophisticated, patented glass insert combine to create a non-sloping all-weather roof – for a unique aesthetic.

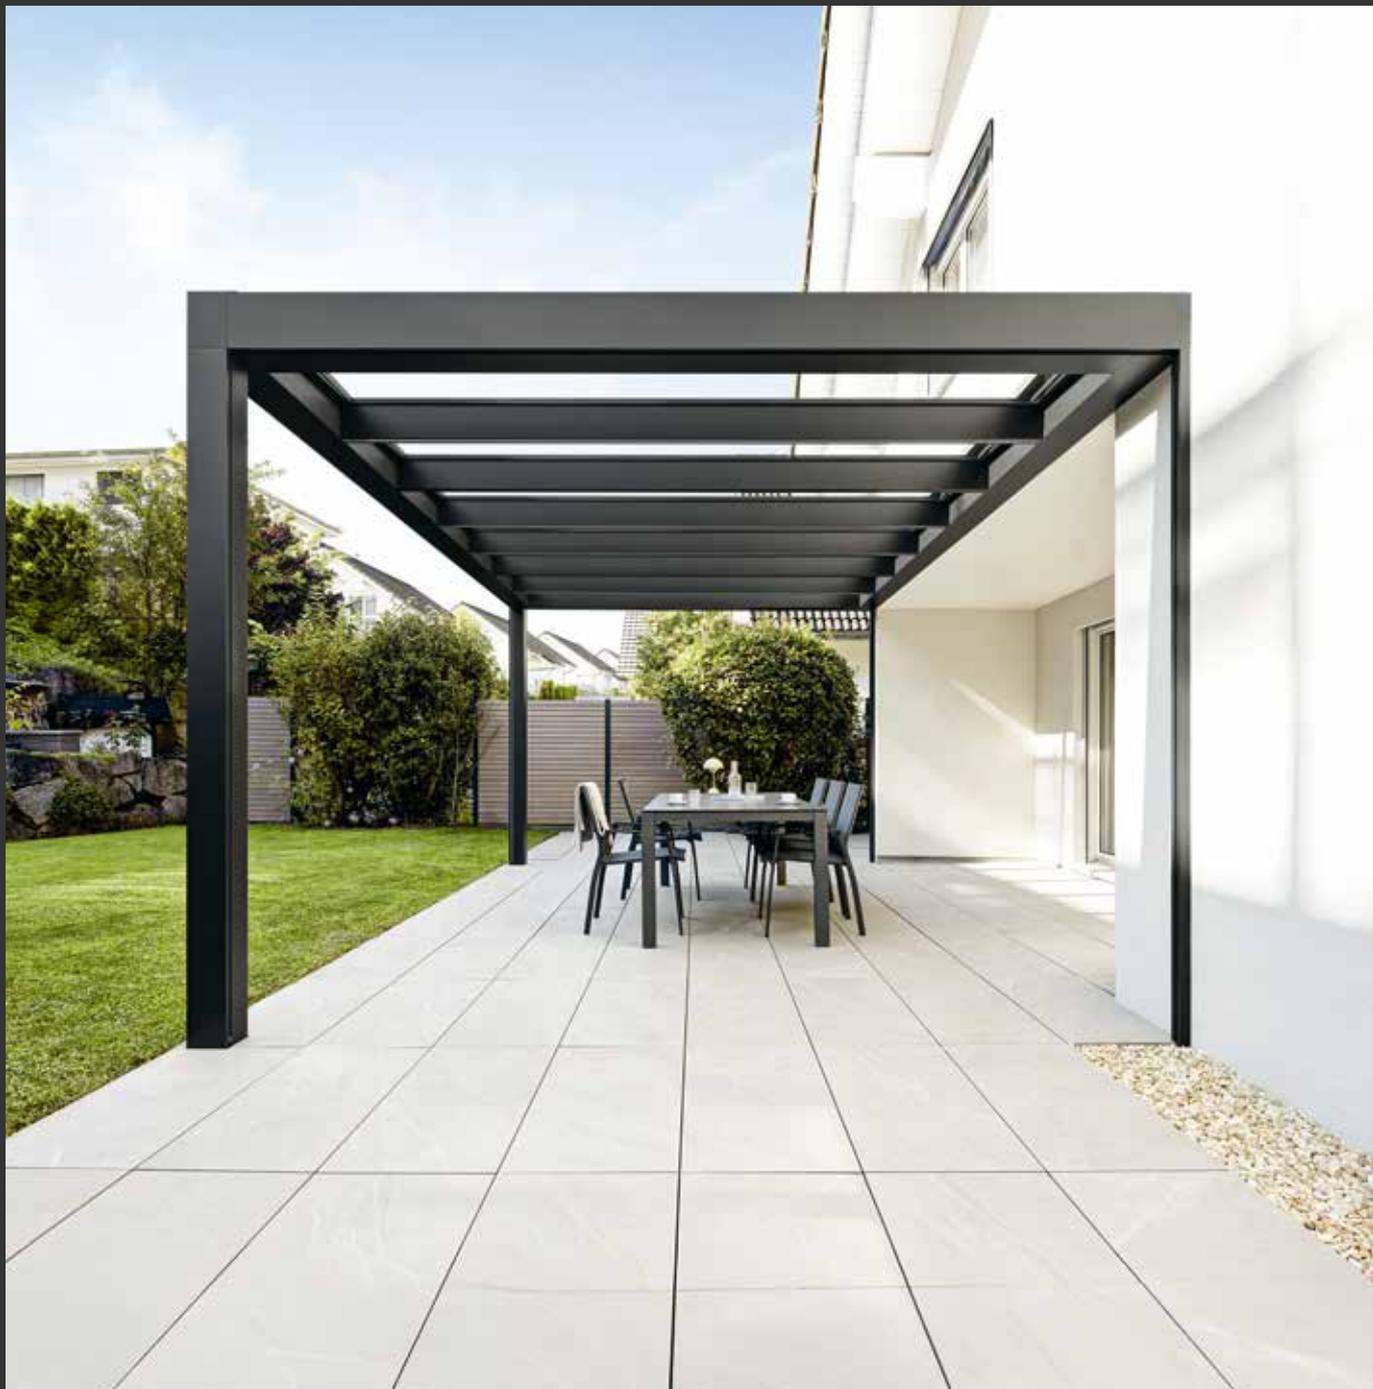

Less frame. More impact.

The construction allows for maximum daylight and creates a bright, welcoming atmosphere that harmoniously connects indoor and outdoor spaces. Unobstructed views to the outside offer openness and spaciousness. Optional compact, stylish supports allow for an integrated power outlet for added convenience. The best part: VETRO FINO works without a roof slope. Its cubic, horizontal construction guarantees full headroom and a modern, clean design - clearly unique from classic glass roofs.

Strong. Slim. Secure.

As delicate as the design appears, VETRO FINO is a true powerhouse. The construction easily withstands snow loads of up to 450 kg/m². That means even during heavy winter conditions, your outdoor living space remains safe and protected. Additionally, the system can be custom configured to meet local snow load requirements, ensuring it is optimally adapted to each specific site.

All the technical details are listed for you on page 59

Invisible yet ingenious water drainage system

Rain? Not a problem. The VETRO FINO water drainage system is hidden away in the structure – directly integrated into the frame and supports. Glass elements inserted at an angle drain

the water along a defined path, with no visible channels or bothersome drainage areas – so the patio stays dry and clean even in bad weather.

Watch the animation of the clever water drainage system – perfectly integrated for dry comfort in any weather.

Perfectly integrated shading – for comfort without compromise

The roof shading has been specifically developed for VETRO FINO and blends in harmoniously with the glass roof construction. It provides complete shading with no annoying chinks of light and reliably prevents glare, while the roof fully retains its elegant, slim look. Side vertical awnings are optionally available on up to three sides to further enhance living comfort. The vertical shading is di-

screetly integrated into the construction frame – the roller tube remains concealed in the frame, while the guides are hidden inside the supports. Thanks to the proven ZIP technology, these vertical awnings help create a fully protected space with seamless shading – with no visible technology or disruptive gaps.

Scan and experience what the slim design and perfect integration look like.

No wedges needed – thanks to innovative glass roof construction: the patented glass insert in the roof eliminates the need for wedge glazing to accommodate the angle of a sloping roof. The roof appears completely flat from the outside – with no visible slope, creating a harmonious overall look that meets the highest aesthetic standards.

Modular side glazing – flexible and stylish

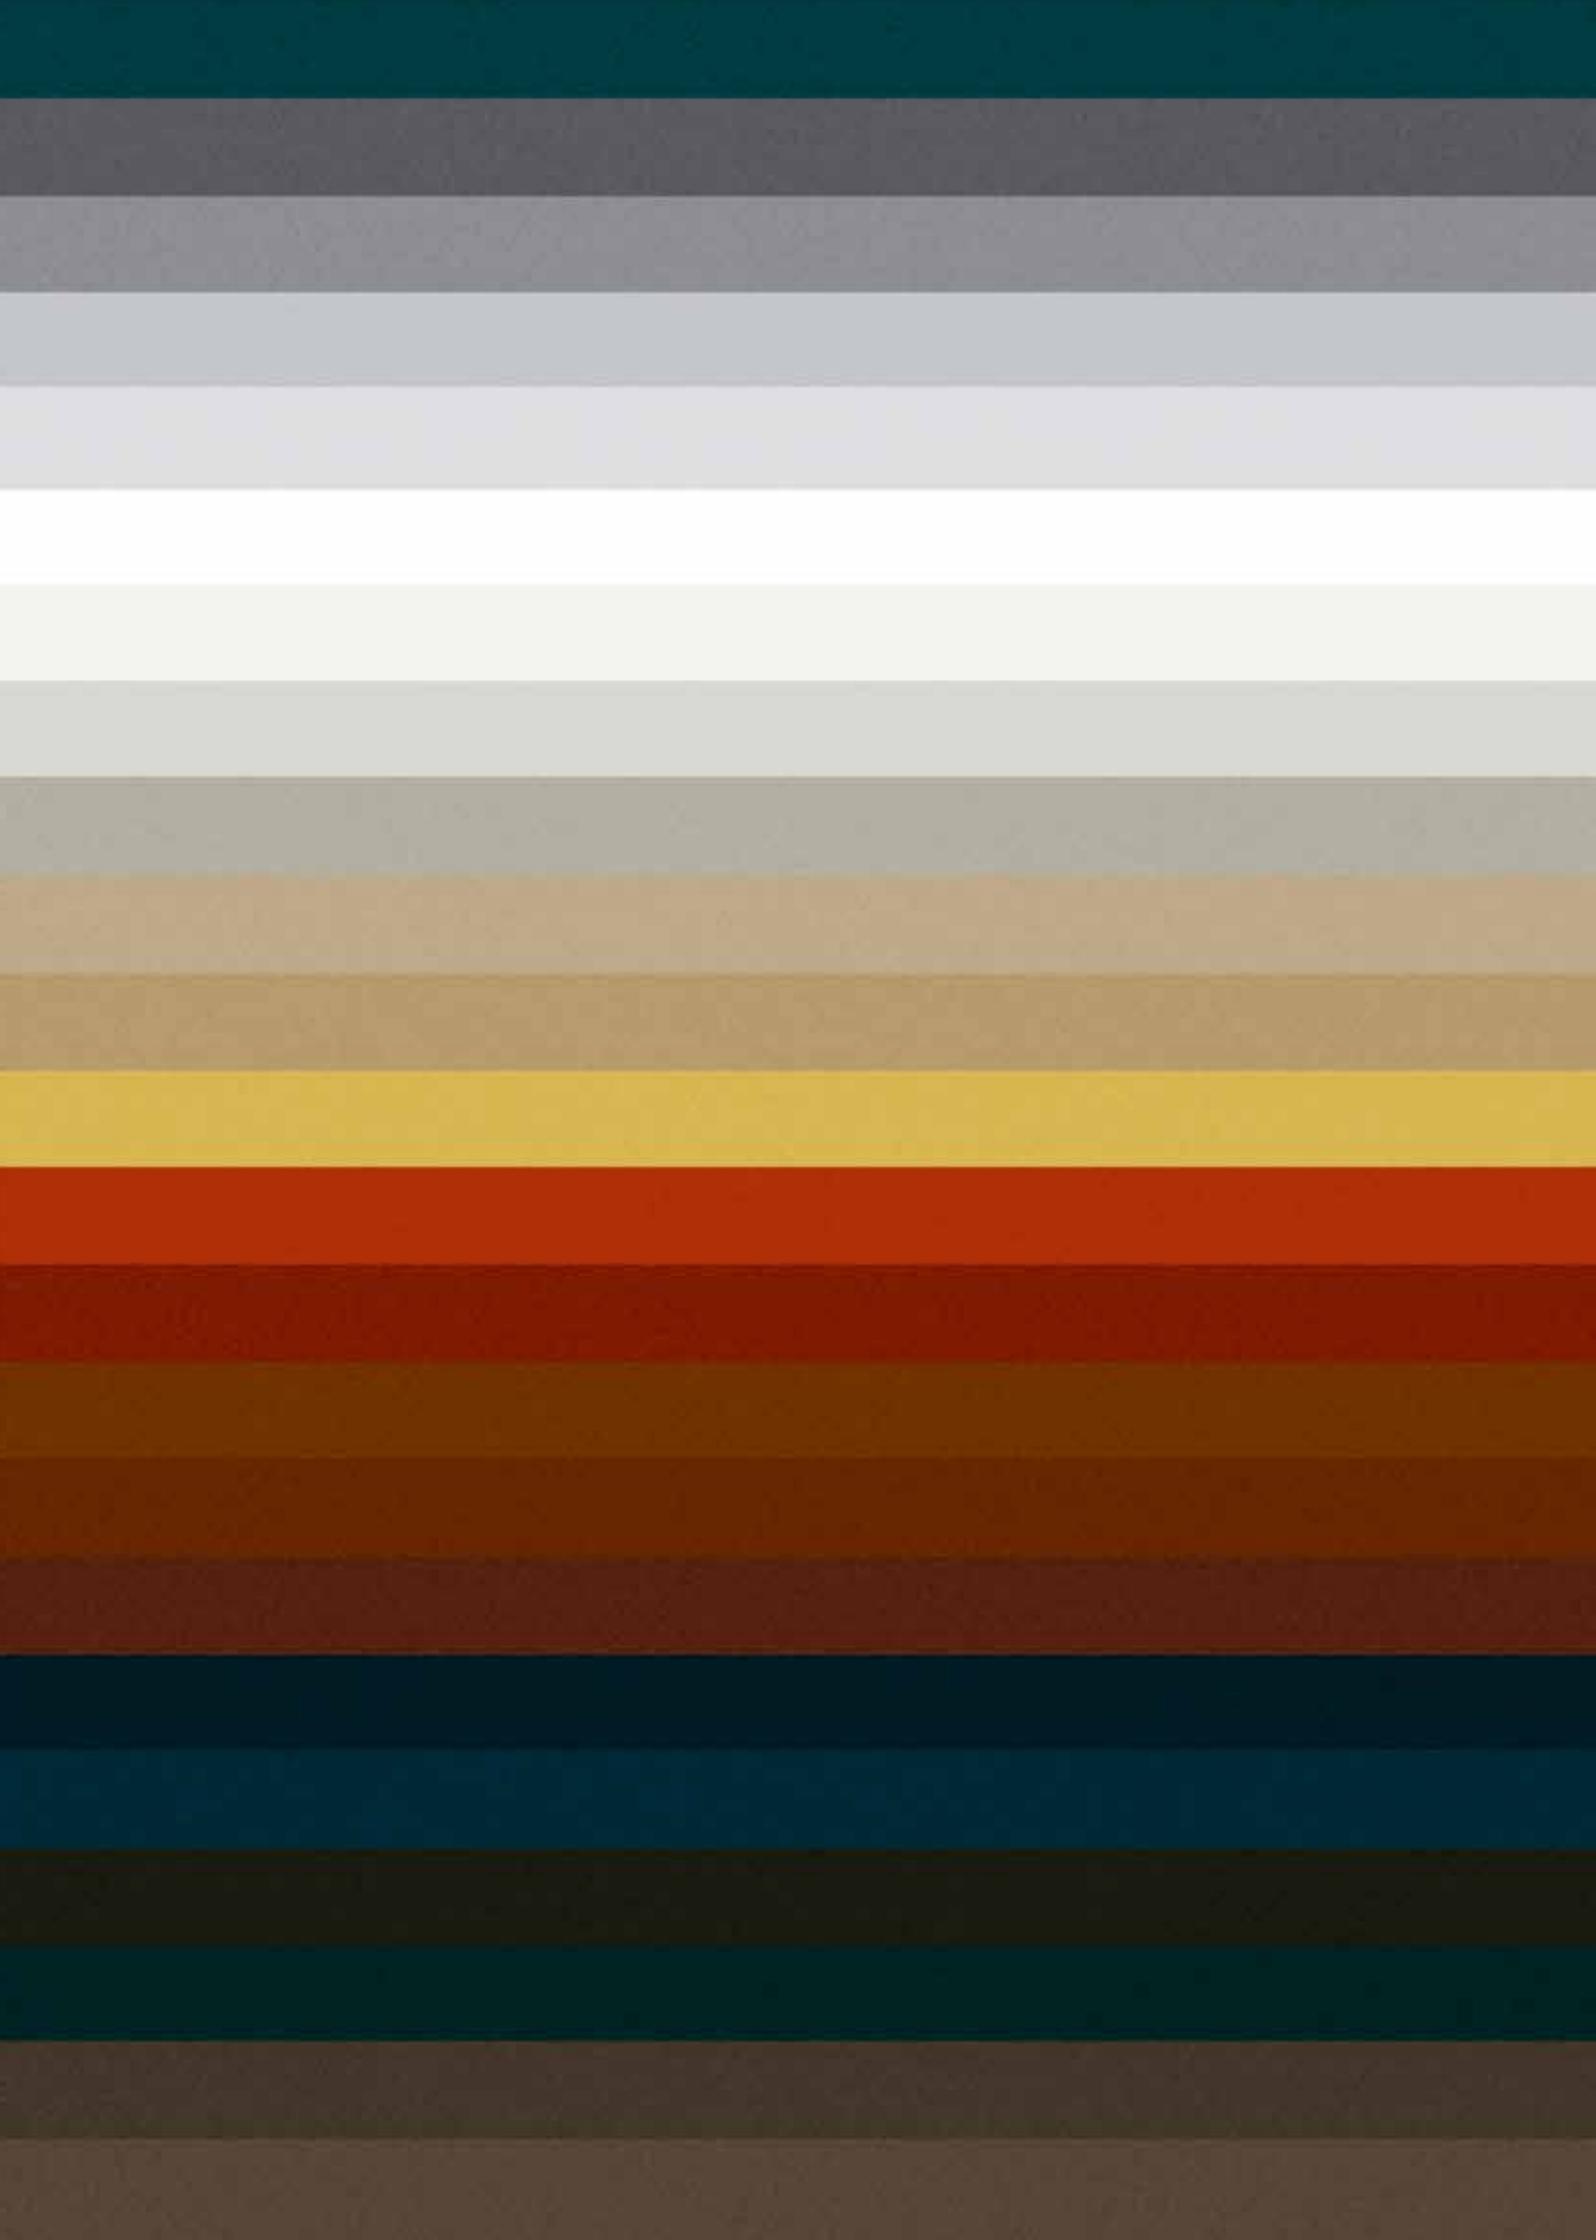

Whether fixed or sliding – the VETRO FINO side glazing can be integrated into existing construction. It provides reliable protection from the wind and weather while also creating light-flooded spaces with an unobstructed view of the outside.

VETRO FINO starts to reveal its magic as the day draws to a close. The fully integrated, dimmable LED lighting – available as discreet spots or elegant strips – transforms any patio into an atmospheric oasis of well-being, with all the technology hidden out of sight.

Tunable White – light that adapts to your mood. The LED strips for VETRO FINO are more than just lighting – they create atmosphere. Infinitely variable colour temperature control allows you to create exactly the mood you want – from invigorating cool white in the morning to soft, warm white for a relaxing evening. Be it dinner with friends, a good book in your hand or a glass of wine under a starry sky – Tunable White perfectly sets the scene for any moment. Best of all, the technology remains out of sight, as it is fully integrated – for a discreet yet impactful ambience.

Colours, forms, freedom

Frame colours and modularity

Design your VETRO FINO in your own style. Choose from over 30 elegant frame colours – from timeless white to rich bronze. The high-quality powder coating guarantees brilliant colours and durable weatherability – for a patio canopy that provides shelter and makes a statement.

Best of all, VETRO FINO adapts as your needs evolve. The modular design allows subsequent integration of side glazing, shading or lighting – without the need for a rebuild. So it's up to you when and how to expand your outdoor space.

NYON

Familiar style. Design freedom.

The NYON product line combines the familiar aesthetic of classic glass roofs with the freedom of custom design. Slim lines, proven technology and a multitude of possible features create a space that adapts to your lifestyle.

The NYON base model impresses with its first-class workmanship and fulfils the highest established standards. NYON Plus goes one step further, as its tried-and-trusted design language and slimline architecture allow special custom configurations – for even more individuality and architectural freedom. Be it asymmetric roof solutions, exceptionally high snow loads, special dimensions, or particular requirements in terms of function and design – NYON Plus adapts to your ideas and creates spaces that provide inspiration as well as protection.

Slim, classic form

NYON and NYON Plus are made to combine classic elegance with modern lightness. Despite their traditional form, they convey a sense of lightness and elegance – thanks to their pared-back construction and distinctive design language.

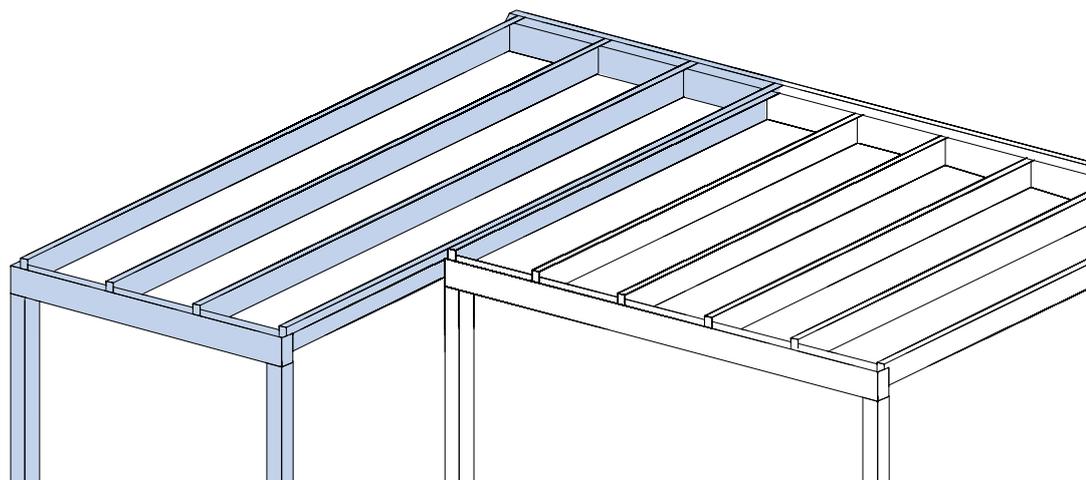

High-quality workmanship and customisation options for the dimensions and colour make NYON and NYON Plus perfect, stylish patio canopies.

NYON Plus – freedom in form and function

NYON Plus goes beyond the classic glass roof, opening up new design freedom. Its elaborate construction allows even special forms to be produced – be it asymmetric roof solutions, special dimensions, or particular requirements in terms of function and design.

This flexibility makes NYON Plus the ideal solution for demanding architectural projects for which standard is not enough. The sleek lines are retained for an aesthetically clean overall look that blends in harmoniously with any surroundings.

Roof shading – comfort without compromise

The roof shading elegantly integrated above the glass provides reliable protection from intense sunlight and heat. A special highlight: the shading system features a seamless front design with no distracting light gaps, ensuring effective, glare-free protection beneath the roof. The fabric shading on the outside naturally regulates both light and heat, ensuring a noticeably pleasant climate. The sun's rays are absorbed before they reach the glass – so the heat stays outside, while the space beneath

the roof remains a pleasant place to be. For enhanced comfort, well-being and relaxation in the open air. On the NYON model, the roof shading can also be mounted below the glass – a solution that looks impressive yet still provides shelter from the rain and wind. It therefore stays cleaner for longer and lasts longer. The technology remains discreetly in the background, giving a clean and tidy overall appearance.

Scan and explore! Discover how STOBAG glass roofs enhance your outdoor living: flooded with light with no annoying glare.

Safely through the winter

A glass roof must do more than just offer rain and sun protection. Load-bearing capacity is crucial in regions that experience regular snowfall. The NYON roof from STOBAG, with a load-bearing capacity of up to 200 kg/m², effortlessly meets the average requirements – ideal for locations up to 800 m above sea level, where there can be up to 30 cm of fresh snow on the ground. Depending on conditions, this can equate to around 30 kg/m² – no problem at all for NYON. Even in heavy wet snow, which can weigh up to five times as much – around 150 kg/m² – NYON remains stable and reliable. It can therefore provide safety and comfort in even the most adverse of weather conditions.

NYON Plus is the ideal choice for particularly challenging conditions in Alpine regions: its load-bearing capacity of up to 600 kg/m² makes it extremely adept at handling extreme snow loads. Every STOBAG glass roof is custom-configured – tailored to the region and the specific local requirements – resulting in a bespoke system that provides visual inspiration in addition to protection.

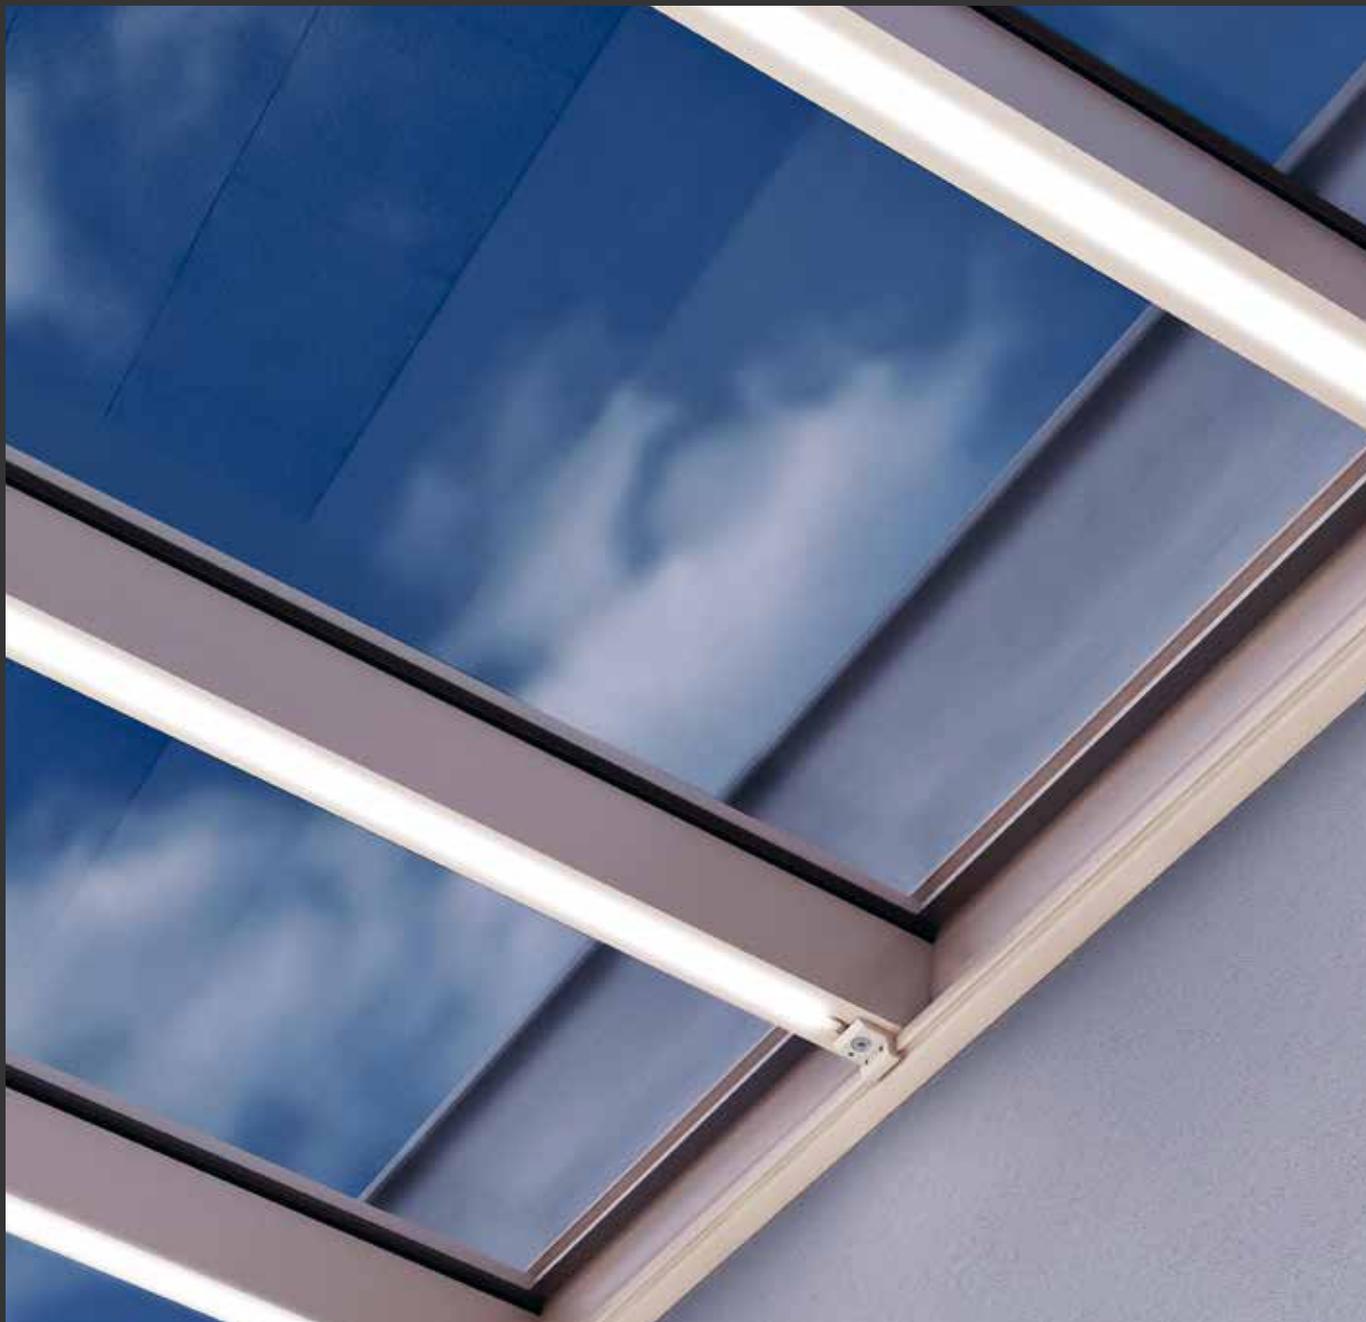

All-round protection – with side protective elements

Optional side protective elements enhance living comfort in the open air; they offer protection from the wind, rain and low-lying sun as well as provide pleasant privacy – without losing the view of the outside. Be it with sliding, fixed or wedge glazing – each solution can be seamlessly integrated into the design, expanding the sheltered space in elegant and functional style. Even fabric versions such as vertical awnings offer reliable all-round

protection; they combine protection from heat, prying eyes, glare and weather with a stylish design and flexible adjustability. Thanks to their modular structure, these protective elements can also be retrofitted or expanded – however you like – resulting in an outdoor space offering a perfect combination of security and openness, which you can use all year round.

The integrated LED lighting with spots or strips adds an atmospheric touch and is fully weatherproof. Rain, snow, wind or temperature fluctuations? No problem – it works reliably and creates a welcoming space to enjoy all year round. High-quality materials and protected installation ensure lasting safety and comfort – for an outdoor experience that endures.

BAVONA Soft-Top

**Add a touch of Mediterranean flair
to your home.**

This elegant folding awning brings Mediterranean flair and convenient sun and rain protection right into your outdoor space. The fabric folding roof with patented scissor technology can be smoothly and conveniently extended and retracted at the push of a button – for a true open-air feeling. The BAVONA Soft-Top offers stylish flexibility and comfort thanks to modular features, optional LED lighting, side shades and side glazing.

Adapts to the application

The BAVONA Soft-Top is manufactured with millimetre precision, blends in seamlessly with the architecture and lends your garden an elegant, Mediterranean touch. As a pergola on the facade, a freestanding pavilion, a stylish atrium* or an ingenious corner solution, it combines cubic design with versatile functionality, enhancing your garden with a true sense of outdoor living.

Sun and rain protection combined – the fabric can be extended and retracted at the push of a button thanks to the motor drive, which comes as standard. The folding awning provides reliable protection from the sun and, thanks to the waterproof PVC fabric, also from moderate rainfall. The integrated drainage system channels water away through the supports – completely out of sight. Choose from various fabric colours and enjoy the benefits of fireproof materials – for protection, design and functionality.

All the technical details are listed for you on page 91

Light, protection and privacy

For relaxing evenings, the plug-in, dimmable LED lighting on the water channel provides direct or indirect light. Additional side and front shades ensure reliable protection from the wind and the low-lying sun as well as creating greater privacy for undisturbed moments. Side glazing is particu-

larly worthwhile, especially in exposed locations, as it provides reliable protection from the wind and moderate rainfall, creates a pleasant ambience, and allows you to enjoy your outdoor space in comfort whenever you like.

ASTANO Soft-Top

Discreet look – powerful effect.

The ASTANO Soft-Top – when architecture meets lightness. This elegant folding awning with Mediterranean flair has been specially developed for supportless installation between facades or on existing constructions – ideal for atriums, skylights or modern buildings with clean lines. Thanks to the patented scissor mechanism, the fabric glides exceptionally smoothly and evenly, while the optional LED lighting transforms your outdoor living space into a stylish retreat, even after dark.

The ASTANO Soft-Top allows you to enjoy the ambience of your favourite outdoor spot whenever you like. The fabric roof offers sun and rain protection at the push of a button, while the dimmable LED lighting provides cosy light.

Sun and rain protection

The ASTANO Soft-Top provides reliable protection from intense sunlight and moderate rainfall. Operation is easy thanks to the motor drive, which comes as standard – the folding awning roof opens and closes smoothly and quietly at the push of a button. A cleverly integrated water drainage system efficiently channels away the rain through the construction – completely out of sight yet always under control. High-quality, flame-retardant materials and a wide range of colours ensure safety, design variety and harmonious integration into your surroundings.

Create exactly the mood lighting you want

The plug-in LED lighting on the water channel provides just the light you need – directly or indirectly. A dimmer function allows you to adjust the brightness and transform your outdoor space into a cosy retreat, even after dark. The ASTANO Soft-Top adds ambience and extends your enjoyment well into the night – for relaxing hours in the open air.

All the technical details are listed for you on page 90

PERGOLINO

The perfect fit.

PERGOLINO transforms your patio into a favourite spot no matter what the weather – in the sun, wind or even rain. The facade-mounted pergola awning offers reliable protection and provides a sense of security. The individually repositionable supports ensure maximum flexibility and stability – even in changing weather. Stays looking good, stays taut – the automatic fabric tensioning prevents water pockets, so the fabric keeps its shape even in the rain. Dimmable lighting lets you create just the right atmosphere for any moment in the evening.

Flexible installation. Just how you like it.

Thanks to its versatile mounting options, PERGOLINO can be attached both to the wall and to the ceiling – using specially developed ceiling brackets for a secure and stable installation. Special highlights include the repositionable supports, plus guide rails with adjustable width and depth. Even the fixing brackets can be flexibly positioned – for maximum design freedom and optimum integration into your surroundings.

For ground fastening, there is a choice of planter, ground sleeve or base plate – depending on the situation and your preferred style. Each model guarantees optimum stability. Even when the wind picks up, you can rely on PERGOLINO standing firm thanks to its high wind stability – for carefree hours in the open air.

All the technical details are listed for you on page 90

STOBLOCK takes care of the adjustments – leaving you to relax

In addition to being a real eye-catcher, the PERGOLINO pergola awning makes your outdoor space even more inviting. The STOBLOCK system automatically keeps the fabric taut, with no need for manual readjustment – come rain, shine or wind. For you, this means no creases, no water pockets and no worries. Choosing the right slo-

pe and fabric keeps the rainwater drainage under control, while the fabric stays flawlessly smooth day after day. STOBLOCK ensures comfort and safety – without you having to do anything, leaving you to relax and enjoy your time outdoors, safe in the knowledge that you are well protected.

Atmospheric light

Enjoy your patio in the evening, too – thanks to the integrated LED lighting. You decide whether to integrate the lighting into the guide tube, the guides or both. Whether soft, warm light for relaxing or bright, clear light for reading or eating – Tunable White technology makes it easy to adapt the lighting to your mood. As well as being practical, the lighting is also discreetly integrated into the product design, creating a pleasant atmosphere that fills your outdoor area with a sense of well-being.

RIVERA

Big in size. Strong in performance.

RIVERA is the ideal solution for large terraces and outdoor commercial spaces that call for reliable protection and stylish design. With a projection of up to 7 m, the robust pergola awning offers maximum shading and outstanding protection from the rain – perfect for hotels, restaurants or outdoor lounges. The taut fabric allows rainwater to drain away quickly thanks to the roof slope and the discreetly integrated openings or drain pipes. Even in strong winds, RIVERA remains stable – certified to the highest wind resistance class. To further enhance comfort, available options include LED lighting, side and front shades, glazing, and a top board. The modular design allows easy retrofitting and makes RIVERA the preferred choice for architects, planners and businesses.

Expand your outdoor space into a stylish, weatherproof haven – for more guests and more time outside.

Thanks to a flexibly adjustable roof slope of 8° to 25°, RIVERA can adapt perfectly to various structures – whether mounted directly on the facade or on existing constructions. Up to seven modules can be linked in particularly large areas – with an impressive overall width of 35 metres. A range of additional features is available for creating a cosy ambience and enhanced comfort. These include

dimnable LED lighting integrated on the side in the guides, which creates a welcoming atmosphere – be it al fresco dining or a special event – so your guests are sure to enjoy a wonderful evening. The installed side and front shades, along with the side glazing, provide protection from the wind and weather and ensure a fully sheltered outdoor experience.

All the technical details are listed for you on page 91

BOXMOBIL

Two cassettes. One inspiring system.

Generous shade. Whether on the penthouse terrace, in the garden or on the patio – BOXMOBIL provides reliable sun protection in medium-sized to large areas. Two box awnings are mounted on a stable steel support structure – with no obstructive centre support, leaving the space beneath fully usable. There are two designs available: one with a square front rail, one with a round front rail. The freestanding double awning is easy to operate using a crank handle, making it ideal for flexible usage. For even greater convenience, there is an optional motorised drive available, which extends the two awnings either simultaneously or separately at the push of a button. BOXMOBIL really comes into its own on rooftop terraces with limited structural options or when planning is done retrospectively.

**A choice of supports with one thing in common – stability**

The Boxmobil stands firm, no matter how you choose to install it. The robust supports can be either discreetly anchored in the ground using recessed ground sleeves or fitted with concrete bases. Both versions remain stable in wind or bad weather while blending in seamlessly with their surroundings – for a great outdoor feeling whatever the weather.

**Drop valance – more than just shade**

As the sun dips low and bathes the day in golden light, the drop valance turns every outdoor moment into pure relaxation. The drop-down valance with glare protection, easily lowerable using the crank handle, provides reliable protection from sunlight. Thanks to the floating system, the fabric rolls up exceptionally evenly. Choose either opaque acrylic fabric up to 110 cm or translucent fabric up to 160 cm – for more privacy and a feeling of freedom.

All the technical details are listed for you on page 91

OMBRAMOBIL

Mobile shade, redefined.

Make the most of summer in the perfect spot – with the STOBAG OMBRAMOBIL. This freestanding double awning can be flexibly positioned and usually requires no planning permission thanks to its mobile design. Ideal for small to medium-sized seated areas, it provides reliable protection from the sun where you need it most. It has a crank handle for convenient manual operation, and both shades extend simultaneously. Your own personal open-air haven.

**Securely fastened – however you like.**

There are various options for securing the double awning: the supports can be anchored either in the ground using ground sleeves or on stable surfaces using T-feet. Another option instead of a support is one-sided wall mounting – for greater design freedom during planning.

**Freedom beneath the awning**

OMBRAMOBIL provides shade as well as ensures comfort. The fabric remains well protected in any weather thanks to the integrated top board. In addition, the construction requires no obstructive centre supports, leaving the space beneath the awning fully usable. One particularly practical feature is the small gutter on the front bar, which reliably drains away light summer rain, leaving your seated area pleasantly sheltered even in brief showers.

Hospitality and commercial

More space. More guests. More revenue.

Terrace canopies are far more than just weather protection – they boost revenue. In the hospitality and hotel business, each additional covered area means more space for guests, more comfort and longer stays – come wind, rain or shine. Be it breakfast on the hotel terrace or an aperitif at the clubhouse after a round of golf, a high-quality terrace canopy turns your outdoor space into a weatherproof haven your guests will love – the perfect place to relax and stay awhile.

RIVERA P5000 pergola awning – coupled version for comfortable outdoor areas in residential and care centers. More product details on page 79.

The PERGOLINO pergola awning offers high wind stability and reliable fabric tension for the hospitality sector. See more product details on page 71.

BAVONA Hard-Top louvered roof – creates weather-protected seating areas for businesses and commercial spaces. More product details on page 61.

Make use of your outdoor areas all year round – and turn them into revenue-generating spaces. Our team is always happy to provide comprehensive advice – contact us and discover the perfect solution for your project.

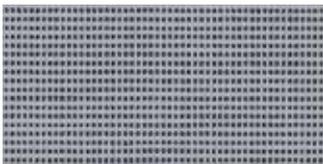

Fabric

Selecting the right fabric is crucial when it comes to ensuring high-quality shading. Colours, textures and material properties all have a bearing on aesthetics, comfort and functionality. All our fabrics provide high UV and heat protection. They can also be translucent, water-resistant, fire-resistant or darkened, depending on the material and coating – so there's an ideal solution to meet any need and any design requirements.

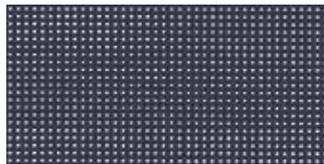

Light and heat protection

Targeted regulation of daylight, heat and transparency for windows with ZIP vertical awnings.

Soltis Horizon 86

Unobstructed views of the outside thanks to maximum transparency. With an opening factor of 14%, the fabric lets in natural light while blocking up to 93% of the heat.

Soltis Harmony 88

Fabric transparency allows a view of the outside. With an opening factor of 8%, the fabric strikes the perfect balance between keeping the sun out and letting the world in.

Soltis Perform 92

Thanks to its low opening factor of 4%, the fabric blocks out lots of light and almost all the heat. Blocks up to 97% of the heat and provides outstanding sun and glare protection.

Soltis Veozip

Optimised for window and facade awnings with ZIP guide. Featuring an attractive matt surface and a textile look and feel. With an opening factor of 5%, it strikes a perfect balance between sun protection and pleasant transparency.

Screens 1%

Stable and durable thanks to coated fibreglass yarns – with an attractive woven texture and two-tone look. The 1% fabric opening factor blocks heat, lets in light and ensures a view of the outside while also providing privacy.

Screens 5%

Coated fibreglass yarns for lasting strength and fabric stability. With attractive woven texture and two-tone look. The opening factor of 5% ensures transparency.

Twilight

100% PVC-free fabric with textile character. The mesh fabric is durable and translucent, with an opening factor of 1.9%.

Blockout

The blockout fabric ensures complete darkening and maximum privacy – ideal for spaces that require protection from light and prying eyes.

Explore our wide range of fabrics using the online fabric finder and order samples.

Sun protection and weather resistance

Effective protection from the sun and weather for awnings and vertical awnings on balconies and patios.

Acrylic

Offers outstanding protection from UV radiation. High-quality acrylic fabrics retain their colour for a long time. Available in solid colours, or with narrow, wide or multi-coloured stripes, or in “Brilliant” design – the exclusive premium version.

Oeko-Weave

Gives over 30% RE-USE fibres a second chance and is certified to Class 2 of the OEKO-TEX standard 100 and OEKO-TEX MADE IN GREEN for effective sustainability.

Water

Special waterproof acrylic fabric as an all-weather solution. A water- and stain-resistant outer coating protects the fabric.

Fire

Flame-retardant design with a water-repellent coating for weather resistance.

Resistant

Suitable for outdoor use all year round and 100% waterproof. This fabric is used for the STOBAG BAVONA Soft-Top and RIVERA products.

Soltis Lounge 96

More light and more air circulation thanks to microperforated material, plus 97% blockage of UV rays. The glare-free view of the outside gives an even greater feeling of freedom. High UV stability for enduringly beautiful colours.

Our fabrics offer a wide range of functions – from shade and variable translucence to water and fire resistance and complete darkening. Many of the fabrics are ideal for specific STOBAG products. Here is an overview of combinations that work particularly well.

RAINBOW colours

With the RAINBOW colours, we offer a wide range of standard RAL options. These colours captivate with a smooth, satin-like sheen free of effects.

They allow harmonious matching of the frame colours with the fabric design and the surroundings. If you still can't find what you're looking for, please get in touch – we'll find a solution for you.

Comfort at the push of a button

It's this easy to control your home.

More freedom, more quality of life – electric control lets you enjoy even more comfort and convenience in your home. STOBAG offers high-quality solutions – from practical handheld transmitters to seamless integration into popular smart-home systems – for sun, light and weather protection that adapts to your daily needs and the weather. You can control everything conveniently using a handheld transmitter or an app on your smartphone.

Choose between classic control and smart solutions that adapt to your daily needs and the weather.

Handheld transmitter

Simple, clear and convenient. Thanks to up to 16 channels, you can control several functions or products using a single transmitter – to meet all your needs.

Sensors

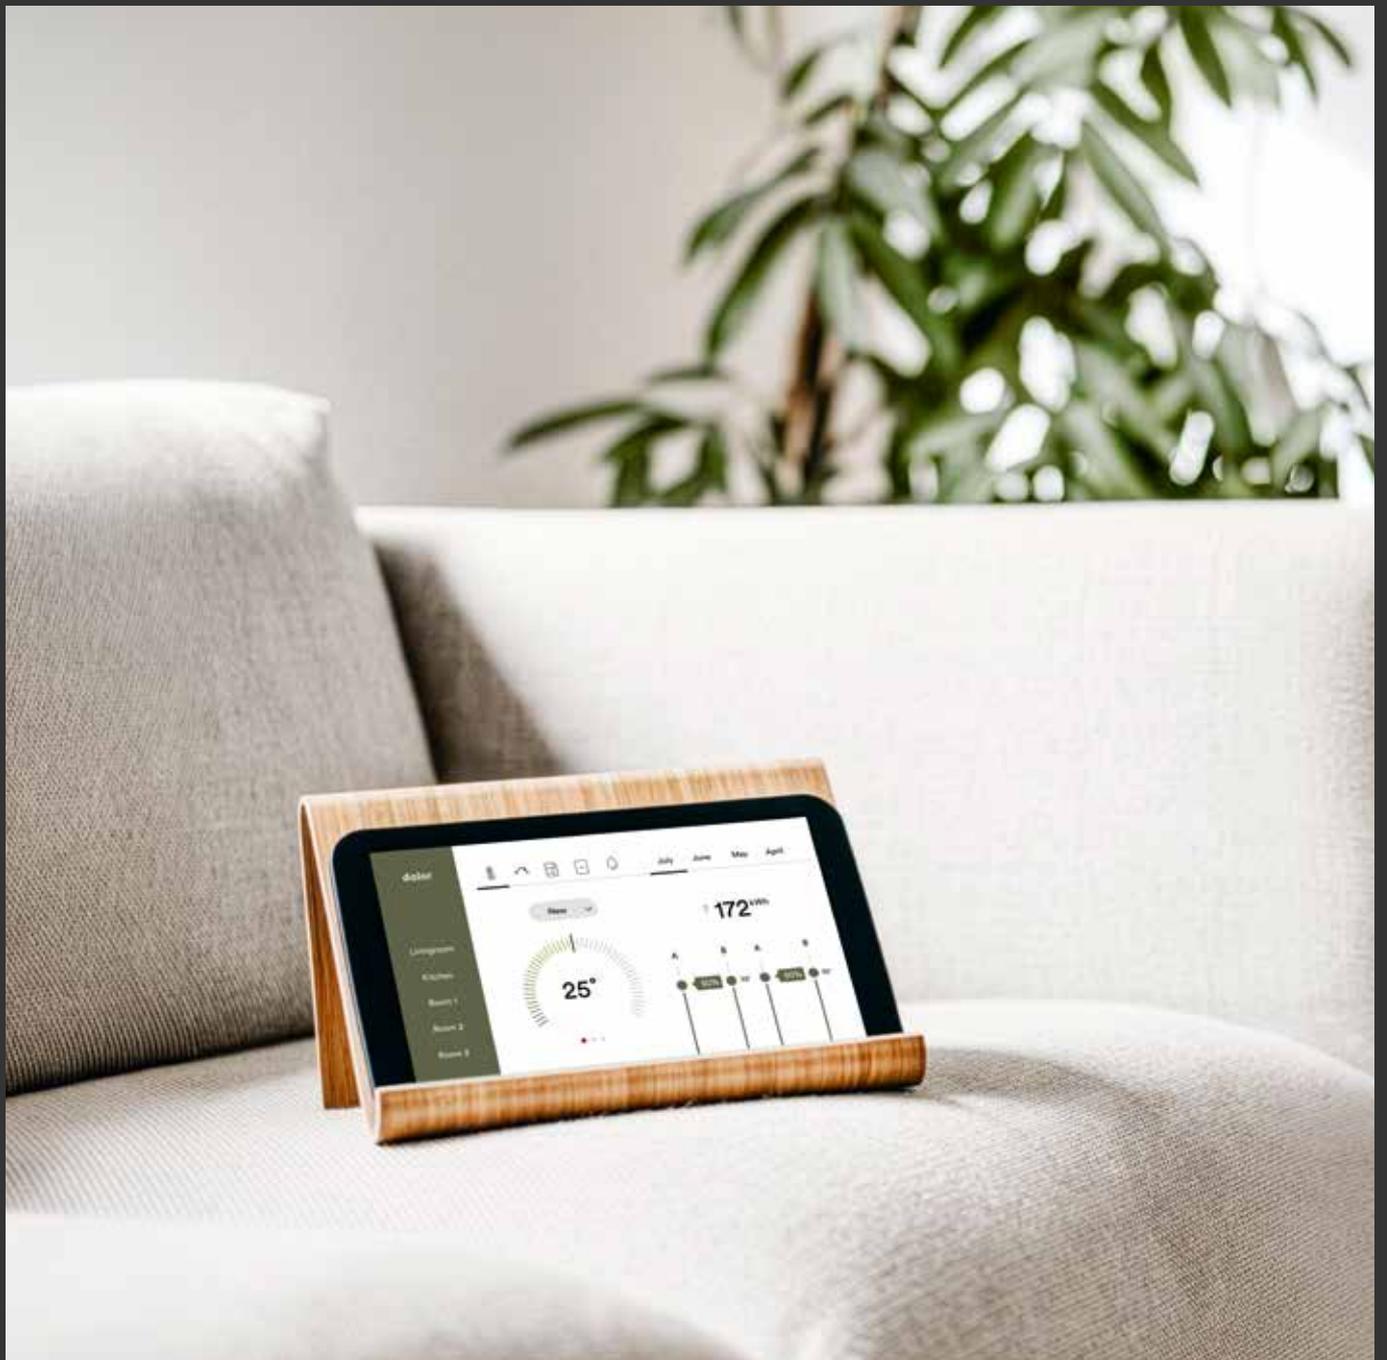

Sensors detect wind, sun and rain, and control your system automatically. This keeps your sun protection safe, leaving you to enjoy a carefree day. In strong winds, the awnings retract in plenty of time to protect the installation. In intense sunlight, they activate the sun protection, preventing your home from overheating.

Smart Home

STOBAG gets you ready for a smart home. You can control everything centrally using the TaHoma app – conveniently on your smartphone or tablet or by voice command, whether you're relaxing at home on the couch or out and about. This lets you keep an eye on all the functions and save custom scenarios such as "evening light" or "sun protection active". Your system reacts automatically to changes in the weather, enhances comfort and convenience, and prolongs the life of your products. At the same time, energy efficiency increases: the sun protection closes in summer to keep heat out, while the sun's warmth is used in winter to create a pleasant indoor climate. For complex living concepts, there are also interfaces to wired control systems such as KNX and DALI.

Retrofittable as and when you need

Needs change – and our products change with them. Almost all of our installations can be subsequently expanded or modernised. You can simply switch your existing solution from cable to radio control, integrate it into a smart home or add sensors. It's also possible to incorporate additional products at any time. Your home therefore remains flexible and adapts to your needs – now and in the future.

Whether for awnings, patio roofs or vertical shading – everything can be operated and controlled centrally. Open and close awnings with a single click, adjust or dim the light how you like, or change the colour temperature. Even the drop valance can be extended and retracted with ease, the slats on slat roofs rotate into any desired position, and side shades react flexibly to your needs. Choose between classic control and smart solutions that adapt to your daily needs and the weather.

Bespoke advice for your project

Experience the variety of our sun and weather protection solutions live – in one of our STOBAG showrooms. Our experts provide comprehensive advice on patio roofs, shading solutions, and the right fabric selection.
